SMART SECURITY SOLUTIONS FOR MANUFACTURING

Video, access control and critical communications solutions are crucial to ensure the security of your property, equipment and products, as well as the safety of your employees and facility visitors. At the same time, these solutions can help you monitor manufacturing processes and optimize business efficiencies.

SECURE RESTRICTED AREAS

Manage staff and visitor access to buildings and restricted areas using our Access Control Manager (ACM) system. Unified with ACC™ video management software, ACM™ allows you to detect someone at an access control point and quickly verify the situation with live camera views.

GAIN INSIGHT ON PRODUCTION QUALITY

Remotely look into manufacturing processes to audit production quality or investigate a liability claim using VT100 body-worn cameras, which easily connect to ACC video management software.

DETECT TRESPASSING

Self-learning video analytics allow you to define analytics rules to receive real-time notifications when a person or vehicle enters a perimeter.

INCREASE PRODUCT QUALITY AND CONSISTENCY

Exceptional image detail provides clear visibility of materials in the production line and allows you to monitor the performance of workers and help ensure product consistency.

EASE OF USE

User-friendly software with a simplified screen layout, intuitive controls and customizable features that improve multi-person interactions.

EASY INTEGRATION AND COST SAVINGS

Designed with openness in mind, ACC software with third-party IP or analog cameras that are ONVIF® compliant to allow easy integration with your existing investments.
